

Digging machine 3 Rows

This machine is designed for digging up plastic film of the tunnel type, mulching or 500 holes, up to a working width of 2.00 m.

The role of the rear wheels is to support the plastic film on the ground and thus to avoid any blockage.

The regularity of the working depth is ensured by 2 gauge wheels.

The teeth are protected by protective cones: simple cones or cones with wings.

The profiled shape of the digging teeth, the nature of the steel and the treatments make them very efficient and reliable.

Option:

Simple protection cones

Finned protection cones

Available in 3 rows

Performance table

Ref.	Packing			Performance
	Length	Width	Height
