

Plastic sheet layer

Very compact, it will allow you to unroll your films in all grounds and even on slopes. **The automatic descent of the roller** followed by its **vertical pressure brake** will prevent the plastic from escaping from the wheels in case of wind.

Its deflectors, adjustable in height, length and angle, will allow you to direct the soil and avoid projections on the plastic film.

Its front roller, cleverly placed under the lifting arms, will allow you to prepare a very flat surface before applying the plastic film.

Its inclined wheels will allow the passage on mounds and the installation of the film on the mini tunnels (or tracks).

Tubular construction, adjustment of discs, wheels and skimmers.

OPTIONS

Drip hose reel with burier Fertilizer locator

Micro-granule dispenser with
perforating bar

Planting machine for clods and mini clods 1

row or 3 row beam.

Unwinds all film widths

Unwinds all types of plastic film (polyethylene, biodegradable)

All crops:

Melon

Salad

Tomato

Pepper

Courgette

Strawberry

y

Pineapple

Asparagus

s Flower

Tobacco

Nursery

PERFORMANCE TABLE
