

Ridger layer machine 1 row

Very compact, it will allow you to roll your films in all terrains and even on slopes.

The automatic descent of the roller followed by its **vertical pressure brake** will prevent the plastic from escaping from the wheels in case of wind.

Its deflectors, adjustable in height, length and angle, will allow you to direct the soil and avoid projections on the plastic film.

Its front roller, cleverly placed under the lifting arms, will allow you to prepare a very flat surface before applying the plastic film.

Its inclined wheels will allow the passage on mounds and the installation of the film on the mini tunnels (or tracks).

Tubular construction, adjustment of discs, wheels and skimmers.

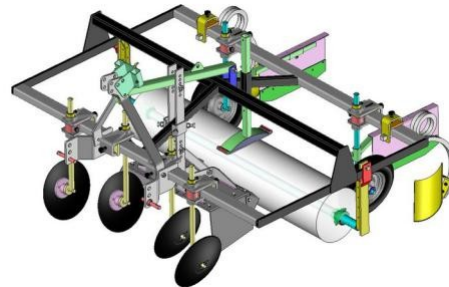

Mound forming housing

OPTIONS

Drip hose reel with burier Fertilizer locator

Perforator

Planting machine for seedlings in root ball or mini root ball

PERFORMANCE TABLE

Roller Stripper 1 row

Designation	REF.	COLLECTION				Performance
