

Lying & Sheath Injection tool

- Tubular frame 100x100 - Double beam
- Headstock category II
- 3 reels of universal drip hose with alus flanges for the installation will be arranged on the back.

- On the rear beam 3 parallelograms and skids

The height control adjusts the depth of burial of the sheath.

- On the front beam there are 2 gauge wheels, adjustable in height and in the distance between the axles, to ensure that the height is preset.

- The reels and buriers will be mounted on flanges allowing the adjustment of the centre distance (example: 1200mm)

- You will have left and right drip feeders

Description burier :

Adjustable depth skid.

Sheath guide on approximately 300 mm avoiding any twisting of this one.

Covered by a spoon arm, all mounted on a parallelogram ± 10 mm.
