

Recycle Unit for Plastic sheets

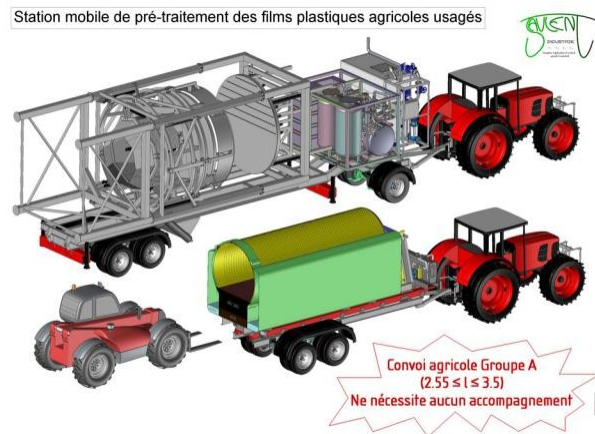

The mobile pre-treatment station for agricultural plastic films enables used plastic films to be cut, cleaned and baled as close as possible to the sites where they are collected. The aim is to transform waste into a marketable product.

The system allows the operator to save a considerable amount of time during the entire plastic processing.

The mobile station is interesting from a financial point of view, as it allows the freeing of local taxes, transfer costs and the request for site classification.

There is no transportation of used plastic, which results in less pollution. It is an ecological system.

To transport :

Machine performance table	
<i>Power</i>	<i>1125 KW or 150 HP</i>
<i>Projection speed</i>	<i>600 to 900 m/s</i>
<i>Pressure</i>	<i>4000 to 6000 bars</i>
<i>Water consumption</i>	<i>2L/min</i>
<i>Speed of the jet water</i>	<i>300 to 1000 mm/min</i>
