

Drip tape roller on roll

The principle of this machine is to unwind flat tubes in a fast and ergonomic way

The unwinding module can be quickly adapted to any type of machine. It is to be clamped on a 50x50 tube.

The reel is self-braking to avoid accidental unwinding of the sheath and a locking bar prevents the reel from coming out of its holder.

The unwinding is done quickly knowing that the speed of the tractor can be 15 Km/h maximum.

The liner reel is a module that can be clamped onto the unwinder.

Thanks to its self-cleaning system, the sheath is rewound, ready to be reused for another campaign. It is necessary to count 1 à 2 minutes to rewind 150m of sheath.

Option:

Cast iron ploughshare allowing a working depth of burial adjustable from 0 to 30cm

Injector with injection tube

Roller tamping machine

Performance table

Ref.	Length	Packing		Performance
		Width	Height Weight	
0,24	0,12	0,6 to 1,03	7Kg	Adaptable on a 50x50 tubular frame Unloads from the flat sheath Equipped with a brake to limit unwinding
