

### Flame Weeder Compact Tractor Version

The diffuser is mounted on the front mass holder of the micro-tractor. The **lighting of the diffuser** as well as the height **adjustment** are controlled from a box. It is located within easy reach of the driver, on the right or left hand side at his convenience. The bell is manually adjustable in **several positions** (left, centre, right), and extendable.

The **bell**, mounted on an extendable arm, **moves around and retracts** when it comes into contact with an obstacle (e.g. a traffic sign). The inward and rearward clearance is approximately 300 mm

The bottle carrier coupled to a 3-point hitch allows the transport of 4 bottles of P 13.

This version is perfectly adapted and designed for local authorities (cleaning pavements, weeding public gardens, etc.) but also for vineyards and arboriculture.

#### Performance table

Width of treatment	BellØ50 cm
Fuel	Propane gas phase
Quantity of gas	52 Kg
Feed speed	2 to 3 km/h
Operating pressure	1,2 to 1,5 bar
Autonomy	8 h (or 7 Kg/h )
Power	50 to 95 kw/diffuser
