

## Salad Planter 4 Rows

### Planting machine for seedlings in plugs and mini plugs

This very compact machine will allow you to plant any type of crop on plastic film, independently or adapted to an unrolling machine.

Planting machine on plastic film, very clever, working by sinking and making a hole corresponding to the shape of the root ball. The planting principle requires little digging, and allows the plant to be well positioned in the soil, as it is directly placed by the operator in the hole, thus avoiding any plant lying down. The position of the operator (direction of advance) allows him to dialogue with the driver. For early planting in tunnels, it allows for the preliminary planting of the holes in which the plants will be placed a few weeks later when the soil is warm. The adjustment of the spacing between plants does not require any calculation and is done simply by moving and screwing the planters in the predetermined holes. Desks allow to store reserves of seedlings.

Performance table					
Ref.	Packing				Performance
	Length	Width	Height	Weight	
P2RD	1,70 m	2,65 m	2,15 m	300Kg	1 driver 2 operators Centre distance of plantation 20cm to 75cm Speed advancement = 1km/h Power tractor = 40HP 2WD
