

Recuplastik IV Seed Maize

The GAINE IV recovery is the latest evolution of this type of equipment. It takes into account the demands of users to **collect more, faster** with less waste.

Composed of a lifting mast and a rotating head driven by a cylinder giving it a **working angle of 111°**. The collection is done from the side or from the front. The head of the machine is located at 2.80 m from the ground when it is unfolded, allowing the bales to be emptied into 20 m³ skips or agricultural skips

Its innovative design with :

- Its rotating head
- Its centre of gravity close to the tractor
- Its opening kinematics
- Its guiding and cleaning ring

make it the **most powerful machine** on the market.

Ergonomics and safety have not been forgotten:

- The markings of all the connectors with the diagram engraved on the chassis
- The easy-to-use valve block

Designed for the collection of drip tubes and also 500 hole, mulch, forcing and greenhouse films as well as its nets and P17 propylene sails.

Machine performance table		
<i>Tractor power required</i>		<i>90 to 130 hp</i>
<i>Hydraulics</i>		<i>Tractor return valve direct tank</i>
<i>Power supply</i>		<i>12 VDC</i>
<i>Weight</i>		<i>800 Kg</i>
<i>Length</i>		<i>2,50 meters</i>
<i>Width</i>		<i>1,90 meters</i>
<i>Height</i>		<i>2,40 meters</i>
<i>3-point linkage front and rear</i>		<i>Category 2</i>
<i>Ballast</i>		<i>See notice</i>
<i>Forward speed</i>		<i>0 to 25 Km/h</i>
<i>Number of sheaths harvested and cleaned</i>		<i>From 1 to 10</i>
<i>Coil diameter</i>		<i>800 mm</i>
GROUNDING SHEATHS
