

Hydraulic Plastic sheet Layer Tunneling machine

DRGA2 hydraulic tunneling machine

This uncoiler has been designed for intensive use and therefore has an oversized frame. It can be used to lay mulch on asparagus beds. It is also suitable for laying 500-hole and P17 film directly on the crop as well as for laying caterpillars.

It is equipped with a plastic film loader, with a reserve of 4 rolls, which ensures high productivity.

The loading of the film roll is done easily with a centering of the film on a biconical roll which avoids the need for two people for loading.

Its forming jig allows to pre-stress the hoops and to ensure their alignment.

The film is covered by mouldboards mounted on a hydraulically deformable parallelogram, controlled by an electro distributor from a 4 button handle.

Performance table

Ref.	Packing			Performance
	Length	Width	Height Weight	
DRGA2 3	2,40	1,50	400Kg	1 driver 1 operator Speed = 4 to 8 Km/h Area per day = 5 to 7 ha/d Tractor power = 80 to 100 HP 4 RM
