

Sugar cane Planter

This high-performance machine has been designed exclusively for sugar cane cultivation.

The sugar cane planter is a 3-point mounted machine which is attached to the rear of the tractor. The selective folding of the side arms allows one of the two arms to be raised during work to avoid an obstacle or to manoeuvre at the end of the field.

This very specific machine is fully adjustable:

- The central console can be adjusted in height and angle of inclination.
- The working height can be changed by adjusting the gauge wheels.
- The planting spacing can be changed by adjusting the spacing of the planting elements and the front gauge wheels.
- The skimmers, which are used to bring the soil to the surface along the planting axis, are adjustable in depth, angle and spacing.
- The wheels that compact the soil and the plant are adjustable in depth and distance.
- The seats and footrests can be adjusted to suit the operator's morphology.
possible.

Performance table

Ref.	PackagePerformance	Length	Width	Height	Weight
PLC	2,501,601,40550Kg	machine mounted on a 3-point linkage	Tractor power = 70 to 90hp	Working depth = 60 cm	4WD
